

PARTS & SPECIFICATIONS

BirdSlide® is a permanently installed bird control barrier that provides a long lasting solution to bird nesting and roosting.

The Slide acts as both a visual and physical deterrent that makes it impossible for any bird to land upon the protected surface.

It is designed to fit into the eaves, ledges, beams, angle irons, and other areas of a building structure. BirdSlide can be used to deter a wide variety of architectural bird problems caused by all species of pest birds. It is especially well suited to heavy pressure activity where roosting or nesting birds are known to overpower spikes and other products.

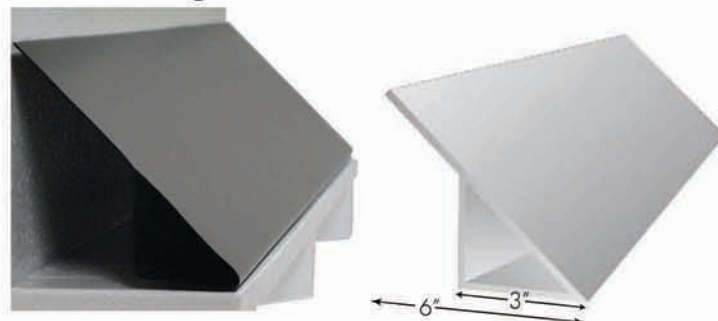

Painting

BirdSlide® is available in a standard gray and beige. BirdSlide can be painted to match any building color. Most home improvement stores provide excellent choices of exterior coat paints that will work well with this product. To achieve a quality well camouflaged result when painting BirdSlide, preparation is key. You can find a more complete description of painting tips by referring to the BirdSlide Installation Guide provided with your purchase.

Customizable

BirdSlide® is designed to be easily customized for any ledge or eave. Simple cuts and slide on extension pieces make it easier to hide BirdSlide from human eyes, yet deter birds from roosting or nesting. With simple customizing, BirdSlide can easily fit difficult corners and angles.

BirdSlide®

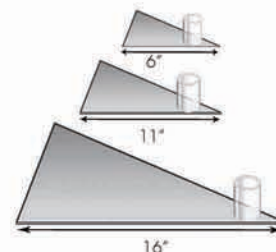

BirdSlide can be cut to fit on ledges 1" to 6"
Available by the linear foot in 4 ft. length sections.
Available for custom order by length and color.

BirdSlide® Slide on Leg Extension
